ABOUT ME

Frontend Developer with 2+ years of experience building responsive, production-ready web applications using React.js and Next.js. Currently at Tech Mahindra, where I've developed internal automation tools using React and Selenium, and contributed to a client-facing automotive e-commerce platform — building shared UI packages and components within a monorepo architecture using Next.js and Shadcn.

PROJECTS

Smart Automation – Internal Web Testing Tool

React.js | Internal Project

Contributed primarily to the frontend development of an internal web-based automation testing tool.

Built intuitive React components that allow non-technical users to configure and trigger automated website tests.

Collaborated with backend engineers working on Java and Selenium to integrate test execution workflows and display results in a user-friendly manner.

Used Car Market Place

Client Project (Pre-release) | Next , Typescript , Tailwind , Shadcn

Contributed to a large-scale used-car e-commerce platform for a global automotive client. Developed customer-facing interfaces and reusable UI components using Next.js, and TypeScript. Worked on vehicle listing and vehicle detail experiences, API/BFF integration, responsive layouts and frontend performance optimization. Collaborated with backend teams to integrate services and deliver production-ready features.

EXPERIENCE

Tech Mahindra

Sep 2024 - present

Develop and maintain enterprise-scale web applications using React.js, Next.js, TypeScript and JavaScript.

Build responsive and reusable UI components using Tailwind CSS, Shadcn UI and Storybook.

Integrate frontend applications with REST APIs and backend-for-frontend (BFF) services.

Work on automotive used-car e-commerce applications, contributing to vehicle listing, vehicle detail and customer-facing workflows.

EXTRA CURRICULAR ACTIVITIES

- Numismatics
- Guitarist
